LEATHER CARE INFORMATION

LEATHER CARE TIPS

Try to maintain at least 2 feet between your furniture and heating sources.

Avoid placing your furniture in direct sunlight. All materials will fade over time when placed in direct sunlight. ANILINE leathers are especially sensitive to sunlight.

For regular care and cleaning, wipe periodically with a dry cloth to remove residual dust and prevent dirt from building up. No harsh cleaners or solvents should ever be used on the leather, as they could abrade the finish or topcoat off the article.

For stubborn stains and spills, a lightly damp cloth with warm water should be blotted on the stain to lift and remove it. If this does not work, a mild soap and water solution should be mixed and then blotted to release the stain and then blot again with dry cloth. This should never be done heavily or in a scrubbing motion. Some finishes may not be suitable for this method so it should be spot tested and allowed to dry before overall use.

Specially formulated products such as Leather Master's leather cleaner and conditioner can be used to rejuvenate fine leather surfaces, however, some leathers are inherently sensitive so these products should be spot tested before overall use.
